AMICUS CURIAE BRIEF OF DIGITAL RIGHTS FOUNDATION

TABLE OF CONTENTS

EXHIBIT A
EXHIBIT B
EXHIBIT C

INTRODUCTION AND INTEREST

The Digital Rights Foundation ("DRF") files this brief as *amicus curiae* to bring forth into light a new argument concerning omissions in disclosure of information to the Court by the Plaintiff. This brief presents information and a perspective which has not been raised by the parties or considered by the Court in such scope and magnitude, and addresses an issue whose importance reaches well beyond the instant case.

DRF is a nonprofit public interest collective devoted to providing education and attention on emerging technological issues while defending consumer rights, innovation, privacy, and constitutional values in the interest of the public. Founded in 2011, DRF comprises of a network of collaborating individuals on a voluntary effort from diverse disciplines and expertise, united in their reliance on a just and fair presentation of information in the legal and judicial systems.

Amicus believes the information presented is of great significance and should not have been withheld from the Court. Amicus further believes this information will present a unique perspective to assist Courts in future cases to prevent exploitation and perversion of the judicial system. Plaintiff should be required to demonstrate, prove, and establish proper and jurisdictional right in cases against Does before being granted leave of discovery and access to personally identifiable information. In many cases as such, Plaintiff knows more about Does than what the Court was led to believe.

ARGUMENT

Plaintiff Has Withheld Information in Disclosure to the Court

From the beginning, the Plaintiff has intended to omit certain disclosures to the Court in order to exploit and game the judicial system. Over the past few years, cases of copyright infringement involving the use of BitTorrent (protocol) technology have ballooned exponentially and continue to proliferate.[1] In nearly each case, the Plaintiffs have been granted leave to take expedited discovery allowing them to issue subpoenas to Internet Service Providers ("ISPs") for subscriber information given Internet Protocol ("IP") addresses, date and time stamps for Does. Additionally, Plaintiffs only minimally provided enough information about Does in their complaint, despite the fact of knowing more about the Does than what they have led the Courts to believe.

How or from whom the Plaintiff obtained the IP addresses, date/time, any other disclosed information as noted in the complaint [See Doc. No. 1], is not within the scope of this brief. For all practical purposes, references to Plaintiff will include any contracted company that may have provided Plaintiff with this information. Within the scope of this brief, is the fact that the Plaintiff knew more about each Does than just an IP address, date/time of alleged infringement, Internet Service Provider ("ISP"), and the protocol and file hash; they also knew the relative geographical origins of each IP address.

In order to identify an ISP for each IP address [See Doc. No. 1], the Plaintiff had a systematic method to obtain this. No individual in their right mind would be foolish enough to perform a manual look up for each of the 2,590 records. The Plaintiff had access to MaxMind®'s GeoIP®[2] products.

It is widely known in the Internet technology realm, that MaxMind, Inc. is an industry-leading provider of geographical location data and technology. Since 2002, MaxMind® GeoIP® products provide a wide range if IP intelligence with their product's ability to "accurately [pinpoint] in real-time the location of Internet customers and visitors by country, geographic region, and the granular detail of city."[3] An example of the kinds of data MaxMind, Inc. provides include for any IP address, information

---

[1] INDEX of Alleged File-sharing and other Mass Litigation spreadsheet (fslit-current-V1.3.18.xls) located here http://tinyurl.com/fslitigate by unknown author is a comprehensive compilation of data obtained from public sources containing a vast number of statistics on alleged file-sharing and mass litigation, last updated August 16, 2011. Author notes the "summary workbook for the purpose of facilitating journalistic inquiry, scholarly research, and public discourse."

[2] MaxMind® and GeoIP® are registered trademarks of MaxMind, Inc. of Boston Massachusetts. Company website is located at http://www.maxmind.com.

[3] http://www.maxmind.com/app/about

such as country and region origin, city level details such as postal codes, latitude, longitude, ISP, organization, metro and area codes, network speeds, domain names, etcetera.[4]

Proof of fact that Plaintiff used MaxMind®'s GeoIP® technology is noted with this observation: Doe 1061 with IP address 68.180.80.44 has an ISP of "Distributed Management Information Systems, Inc ([sic]". [See Doc. No. 1, Page 31; Exhibit A, Page 24] Observe the extra open left parentheses at the end of the text. Inputting this IP into MaxMind®'s GeoIP® City Database demo[5] reveals the exact same text for the ISP. Doe 1118's IP is also associated with the same ISP. [See Doc. No. 1, Page 32; Exhibit A, Page 25]

Furthermore, Plaintiff knew the relative geographical origins of each IP address because no IP address in Doc. No. 1 with origins outside of the United States have been included in the complaint. [See **Exhibit C**] Plaintiff has filtered out IP addresses originating from outside the country because, Plaintiff knew that no court of law within the United States would have jurisdiction over an individual, especially if the country in question has deemed IP addresses as personal information (e.g. Switzerland) or if file-sharing is legal (e.g. Canada), all for the sake of civil action against copyright infringement. Plaintiff knew that citing an IP address of international origin would raise various questions about the merit of their complaint. Reviews of other file-sharing and mass litigation cases[6] reveal that only ISPs for Does involved are established companies or organizations in the United States.

Using similar methods and the technology used by the Plaintiff, Digital Rights Foundation has taken the IP addresses in full from Exhibit A in Doc. No. 1 and performed queries against MaxMind®'s GeoIP® City Database, namely GeoLite City[7]. GeoLite City database's accuracy is over 99.5% on a country level and 79% on a city level for the United States within a 25-mile radius. Complete results of the queries are in **Exhibit C** presented in the same order and information as provided by the Plaintiff with the exception of exclusion of the last column containing the protocol/hash.

Further analysis of the geographical location data of the IP addresses reveal stark revelations that only approximately 29.6% of the 2,590 Does originate from within the State of California, while approximately 70.4% originate outside of California with every other state (including the District of Columbia) represented. [See **Exhibit B**]. **Exhibit A** displays a visual bar graph giving an overview of the analysis from **Exhibit B**.

[5] Query for IP address was made and retrieved December 3, 2011 at http://www.maxmind.com/app/lookup_city

[6] See footnote 1.

[7] http://www.maxmind.com/app/geolitecity using the binary format of the GeoLite City database http://geolite.maxmind.com/download/geoip/database/GeoLiteCity.dat.gz from the November 1, 2011 update; MaxMind, Inc. updates GeoLite City every month.
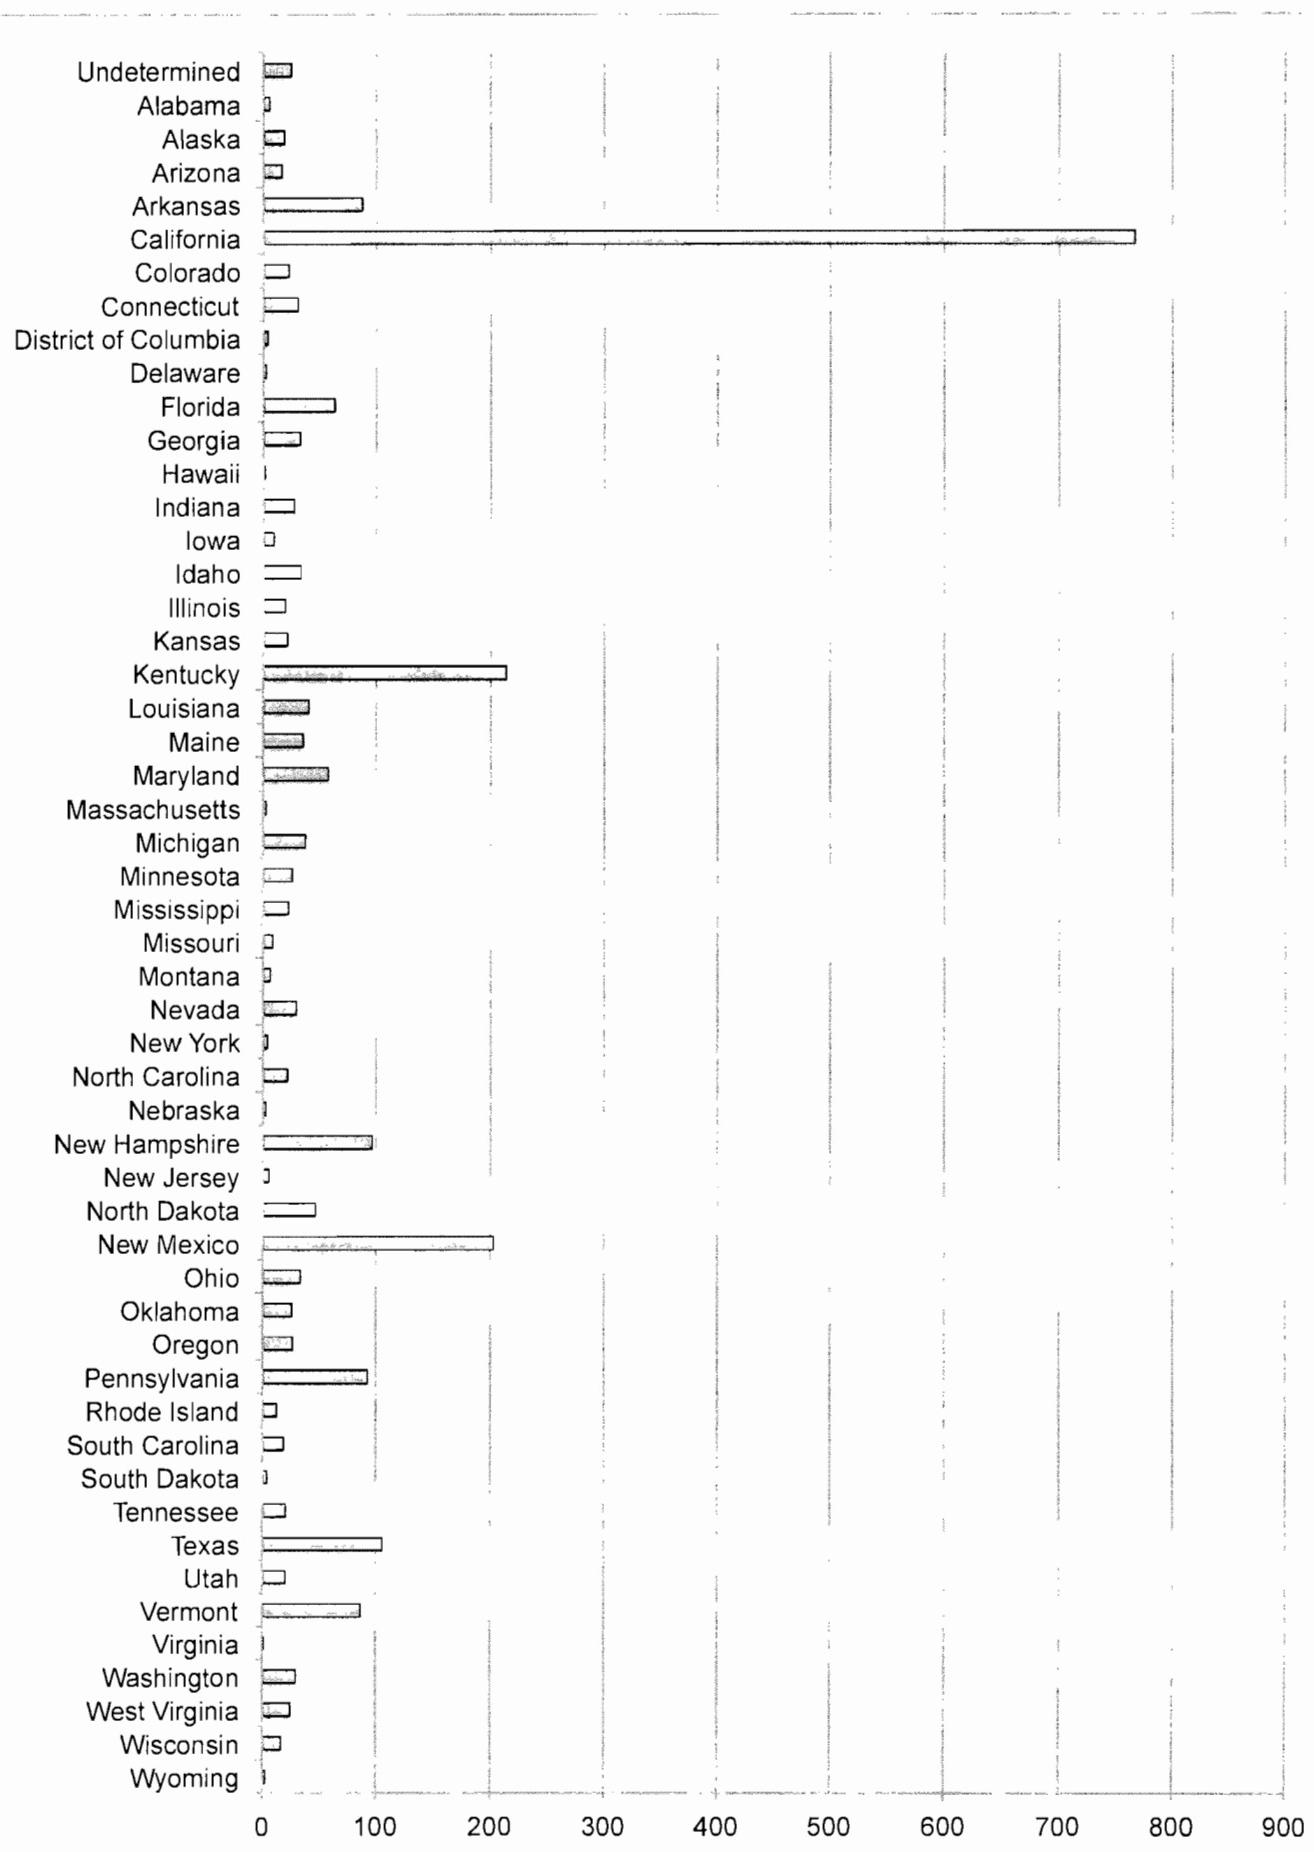

CONCLUSION

Amicus respectfully submits this brief for the Court's consideration as it rules on the forthcoming decisions. Amicus also intends on filing briefs with other Courts involving mass Does to demonstrate and present such facts that in some cases, not even 1% of Does originate within the state of where the civil action complaint was filed.

DATED: December 5, 2011
